1.1	Getting Started	3
1.2	Miscellaneous Specifications and Instructions	4
2	API Reference	7
2.1	common Package	7
2.2	ukapi Package	8
3	Indices and tables	11
	Python Module Index	13
	Index	15

Welcome! This documentation is generated on November 16, 2013 for uknow 0.0.2.3.

NOTES FOR DEVELOPERS

Contents

- Notes for Developers
 - Getting Started
 - * Environment Setup
 - * Configuration
 - Miscellaneous Specifications and Instructions
 - * Framework
 - * Code Style
 - * Documenting

Contact Kai Jia <jia.kai66@gmail.com> if you have any question about this page.

1.1 Getting Started

1.1.1 Environment Setup

1. Install MongoDB, Redis and their development packages if you don't already have them installed. Usually this is via your system's package manager.

2. Install virtualenv:

```
$ sudo pip install virtualenv
```

3. Install python packages as dependencies

```
$ cd manage
```

```
$ ./quickinstall
```

1.1.2 Configuration

The static system configuration file is `manage/config.py`, allowing the developers applying their local settings without having to change the system defaults.

An example file:

```
FRONTEND_PORT = 4999
API_PORT = 5000

API_RUN_OPTIONS = {
    'debug': True
}

FRONTEND_RUN_OPTIONS = {
    'debug': True
}
```

1.2 Miscellaneous Specifications and Instructions

1.2.1 Framework

Flask is used as the web framework, and MongoDB as the database

1.2.2 Code Style

Follow the [Style Guide for Python Code](#). Use `pylint` to check the style and find potential bugs. Execute the `run-pylint` script to invoke pylint.

The following lines should be included in every Python source file:

```
# $File: <file name>
# $Date: <last modification time>
#
# Copyright (C) 2012 the unknow development team <see AUTHORS file>
#
# Contributors to this file:
#   <you name and email here>
#
# This file is part of unknow
#
# unknow is free software: you can redistribute it and/or modify
# it under the terms of the GNU General Public License as published by
# the Free Software Foundation, either version 3 of the License, or
# (at your option) any later version.
#
# unknow is distributed in the hope that it will be useful,
# but WITHOUT ANY WARRANTY; without even the implied warranty of
# MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the
# GNU General Public License for more details.
#
# You should have received a copy of the GNU General Public License
# along with unknow. If not, see <http://www.gnu.org/licenses/>.
#
```

Configure your editor to update the `$File` and `$Date` fields automatically. Add your name to the contributors field and the AUTHORS file.

By the way, if vim is your favorite, you can add the following lines to your vimrc:

```
autocmd filetype python set expandtab
autocmd filetype python set textwidth=79
```

1.2.3 Documenting

Write docstrings for every package, module, public class, public method, public function, etc. The documents should be written in English.

Register all the global names in *global-name-list*.

These documents are generated from [reStructuredText](#) sources and docstrings by [Sphinx](#). Issue the following command to generate all the documents:

```
$ cd <path-to-uknow-source-root>/docs/api
$ ./gendoc.sh
```

API REFERENCE

2.1 common Package

2.1.1 ukdbconn Module

database connections

```
common.ukdbconn.get_mongo(coll_name=None)
```

2.1.2 uklogger Module

utilities for handling logging

```
common.uklogger.log_err(msg)
    log an err message
```

```
common.uklogger.log_exc(exc)
    log an unexpected exception
```

```
common.uklogger.log_info(msg)
    log an info message
```

2.1.3 ukuser Module

utilities for managing users

```
common.ukuser.get_enabled_fetcher(user_id)
```

Returns a list of fetcher names enabled by this user

```
common.ukuser.get_enabled_prefilter(user_id)
```

Returns a list of prefilter names enabled by this user

2.1.4 ukutil Module

common utility functions

```
common.ukutil.import_all_modules(file_path, pkg_name)
    import all modules recursively in a package :param file_path: just pass __file__ :param pkg_name: just pass
    __name__
```

2.1.5 Subpackages

ukconfig Package

ukconfig Package

user config; defaults are in stored in default.py, and can be overwritten by user.py, which is in .gitignore

default Module

default config values

```
common.ukconfig.default.general_fetcher_sleep_interval_default = 10
    interval for each general fetcher to sleep between consecutive fetches

common.ukconfig.default.general_fetcher_sleep_interval_special = {}
    overwrite default settings, fetcher name => value
```

2.2 ukapi Package

2.2.1 ukapi Package

unknown informatin hub API website

global variables: g.user_id ID of current user (int)

```
class ukapi.__init__.DefaultConfig
    Bases: object

    API_HOST = None

    API_PORT = None

    API_RUN_OPTIONS = {}

ukapi.__init__.get_app()
    load API modules and return the WSGI application
```

2.2.2 Subpackages

api Package

api Package

website API entry points

```
class ukapi.api.api_method(url_rule, **kwargs)
    Bases: object

    use as a decorator to register an API

    all_url_rule = []
        class level attribute for all url rules
```

api_implementation = None

a callable implementing current API, which takes no argument and returns a dict

url_rule = None

url rule for current API

url_rule_extra_kwargs = None

extra keyword arguments for url rule

view_func()

the view_func passed to Flask.add_url_rule

`ukapi.api.page_not_found()`

sample Module

sample api

`ukapi.api.sample.test()`

api which returns the answer to life, universe and everything

test Module

test with user id

`ukapi.api.test.test()`

given user id and return all items

INDICES AND TABLES

- *genindex*
- *search*

PYTHON MODULE INDEX

C

- `common.ukconfig`, 8
- `common.ukconfig.default`, 8
- `common.ukdbconn`, 7
- `common.uklogger`, 7
- `common.ukuser`, 7
- `common.ukutil`, 7

U

- `ukapi.__init__`, 8
- `ukapi.api`, 8
- `ukapi.api.sample`, 9
- `ukapi.api.test`, 9

INDEX

A

`all_url_rule` (`ukapi.api.api_method` attribute), 8
`API_HOST` (`ukapi.__init__.DefaultConfig` attribute), 8
`api_implementation` (`ukapi.api.api_method` attribute), 8
`api_method` (class in `ukapi.api`), 8
`API_PORT` (`ukapi.__init__.DefaultConfig` attribute), 8
`API_RUN_OPTIONS` (`ukapi.__init__.DefaultConfig` attribute), 8

C

`common.ukconfig` (module), 8
`common.ukconfig.default` (module), 8
`common.ukdbconn` (module), 7
`common.uklogger` (module), 7
`common.ukuser` (module), 7
`common.ukutil` (module), 7

D

`DefaultConfig` (class in `ukapi.__init__`), 8

G

`general_fetcher_sleep_interval_default` (in module `common.ukconfig.default`), 8
`general_fetcher_sleep_interval_special` (in module `common.ukconfig.default`), 8
`get_app()` (in module `ukapi.__init__`), 8
`get_enabled_fetcher()` (in module `common.ukuser`), 7
`get_enabled_prefilter()` (in module `common.ukuser`), 7
`get_mongo()` (in module `common.ukdbconn`), 7

I

`import_all_modules()` (in module `common.ukutil`), 7

L

`log_err()` (in module `common.uklogger`), 7
`log_exc()` (in module `common.uklogger`), 7
`log_info()` (in module `common.uklogger`), 7

P

`page_not_found()` (in module `ukapi.api`), 9

T

`test()` (in module `ukapi.api.sample`), 9
`test()` (in module `ukapi.api.test`), 9

U

`ukapi.__init__` (module), 8
`ukapi.api` (module), 8
`ukapi.api.sample` (module), 9
`ukapi.api.test` (module), 9
`url_rule` (`ukapi.api.api_method` attribute), 9
`url_rule_extra_kwargs` (`ukapi.api.api_method` attribute), 9

V

`view_func()` (`ukapi.api.api_method` method), 9
