1 Introduction

1.1 Document Introduction

In the following sections of this document, we will present several skim of our project management.

In [Sec. 2](#), how we use git as the subversion tool. Issues and milestones will be presented in [Sec. 3](#).

2 Git

Git is a very useful tool in teamwork development. All our members used it for a long time so we use it well. Merge, rebase and commits show our professional develop skill and the great work we had done.

3 Issues

Issue Tracker is very common used in develop management. It can record the progress of a feature, a fix procedure of a bug, and so on. Every issue as a assignee that has responsibility for that issue with a deadline. Discussions can also be made and recorded under that.

Up to now, we had created 33 issues, resolved 31 of them, most of which are

features.
